

A data-driven solution to empower smarter decisions.

Constellation® is the decision support tool you've been searching for. This solution "connects the dots" by unifying locations and turning data into confident decisions. By connecting all your sites through a single enterprise application, Constellation streamlines operations and delivers real-time visibility and insights.

A game-changer for the way you operate.

Complete operational transparency.

Constellation consolidates your site-level data into one unified platform so you can make fast, informed decisions at every level.

Optimized workflows.

With Constellation, orders flow through a centralized integration, reducing duplicate entry and eliminating the need to manage separate interfaces at each site.

Consistency that powers results.

Constellation facilitates standardized naming, measurement, and product structures across all sites—ensuring clean, reliable data and reducing site-level configuration.

Enhanced accuracy with minimal risk.

Constellation empowers streamlined workflows, supports regulatory compliance, and improves traceability—all while minimizing support needs and limiting local network exposure.

Fully Connected. Fully Efficient.

Leverage benchmarking tools to compare performance across specific sites or overall product throughput.

Easily set up and tailor each dashboard to meet your exact needs.

View current inventory and match it against open orders - all in one convenient place.

A foundational hub for every enterprise.

Standardized data structure

Facilitates consistent naming, measurement, and product configurations across all sites.

Centralized order management

Fulfills orders for your entire organization in one, user-friendly application.

Analytics and dashboards

Includes a powerful dashboard with benchmarking capabilities to track operational trends and individual site performance.

ERP Integration

Seamlessly connects to your ERP system to sync orders and inventory for all locations—eliminating the need for manual entry.

Cross-site order fulfillment

Ability to reassign orders between sites and allow product pickup from multiple locations on a single order.
